

Océ
DPLink®

Plug and Print in Xerox environments

Océ VarioPrint® systems with Xerox® workflow connectivity

Océ DPLink software offers plug-and-print Xerox DigiPath® and FreeFlow® Makeready® connectivity for operations that need or want to maintain a mixed print environment, but don't want to change applications. With Océ DPLink software, the Océ VarioPrint 4110/4120, Océ VarioPrint 2110 Prémia Class®, Océ VarioPrint 6000 Series and the Océ VarioPrint 6000 Ultra Line can process and print jobs coming from these Xerox applications without modification.

Why limit yourself to one printing option, when you don't have to? With Océ DPLink, you can acquire the smart choice. Keep working with your Xerox DigiPath or FreeFlow Makeready software with Xerox print data and job tickets – and send your jobs to your Océ VarioPrint 4110/4120, Océ VarioPrint 2110 Prémia Class and VarioPrint 6000 (Ultra) systems. The result? You can select the best printers for your jobs. Reduce your costs. Maximize your profit. Raise your document quality – and your printing performance. Acquire benefit-rich Océ DPLink for superior printing in your Xerox environment. Océ DPLink directly integrates with the Océ VarioPrint printer controller, building more power and productivity into your processes.

Achieve the results that you expect

When you use Océ DPLink, your jobs will be printed as you and your data intended. DPLink will (in the background) use and interpret your Xerox job ticket information – as almost all features are compatible with the Océ VarioPrint systems. This includes print material selection, tab printing and finishing options.

Additionally, imposition information such as that for booklet and two-up printing will be maintained – as well as header and separator pages, scaling, shift to recto and verso pages of a document, multiple overlays, etc.

This means you can print from your Xerox Makeready environment to Océ printers and get the correct results – without re-entering job tickets and media attributes. You gain all the advantages of the Océ printers immediately. There is no need for a separate server, and there are no conversion problems. Simply plug and print to gain immediate benefits in productivity and reduced costs from not needing to maintain two workflows.

Technical specifications

Functions

Océ DPlink accepts and handles Xerox print jobs and job tickets submitted from:

Xerox DigiPath all versions

- Xerox DigiPath production print
- Xerox DigiPath Document Scan and Makeready program
