Plug and Print in Kodak environments

Océ VarioPrint® systems with Kodak® workflow connectivity

Océ KDKlink software offers plug-and-print Kodak connectivity for environments that want to add Océ VarioPrint 6000 Ultra Line printer to their Kodak SmartBoard® workflow, but don't want to change applications. With Océ KDKlink software, these printers can process and print jobs coming from this applications without modification.

Select the best printer for the job

Why be limited to one printing option, when you don't want to? With Océ KDKlink, you have a choice. Keep working with your Kodak SmartBoard makeready software with and send your jobs with KDK job tickets to your Océ VarioPrint 6000 Ultra systems.

The result? You can select the best printers for your jobs. Reduce your costs. Maximize your profit. Raise your document quality – and your printing performance. Use benefit-rich Océ KDKlink for superior printing in your Kodak SmartBoard environment.

Océ KDKlink directly integrates with the Océ VarioPrint printer controller, building more ease-of-use, power and productivity into your processes.

Achieve the intended results

When you use Océ KDKlink, your jobs will be printed as you and your data intended. KDKlink will (in the background) use and interpret your Kodak SmartBoard job ticket information – as almost all features are compatible with the Océ VarioPrint systems. This includes print material selection, tab printing, inserts, image adjustments, a selection of job finishing options, job notifications and printer feedback information.

This means you can print from your Kodak SmartBoard make-ready environment to Océ printers and get the correct results – without reentering job tickets and media attributes.

You gain all the advantages of the Océ printers immediately. There is no need for a separate server, and there are no conversion problems. Simply plug and print to gain immediate benefits in productivity and reduced costs from not needing to maintain two workflows.
